PORTFOLIO PERFORMANCE

Q3 SEPTEMBER 2020

PORTFOLIO FACTS

Sector: Global – Balanced

Benchmark: CPI + 3%

Regulation 28 compliant: Yes

Inception date: 1 January 2015

Investment Objective:

To achieve the benchmark return while maintaining an overall market position that is defensive. The benchmark is CPI + 3% over a 3 year rolling basis. Optimal asset allocation is determined using sophisticated loss aversion statistical modelling.

PORTFOLIO ANALYSIS

	Conservative	CPI + 3%
3 months	-0.28%	2.71%
6 months	9.51%	2.69%
1 year	-1.38%	6.10%
3 years	4.06%	7.12%
5 years	5.12%	7.61%

Market commentary

A little more than nine months ago, we began to hear whisperings of a deadly virus that had emerged in Wuhan, the capital city of the Hubei province located in central China. As the third quarter of 2020 comes to an end, the number of confirmed deaths linked to COVID-19 has now passed the one million mark. Currently, travel between countries remains muted, economies have been left on their knees and many industries remain severely depressed. However, global equity markets have recovered strongly.

The third quarter saw the MSCI All Country World Index - a broad measure of global equity markets - completed its recovery from the depths of March, following a return of 8% for the quarter as its performance year-to-date returned to positive territory. While the strong performance for the quarter was broad-based, for the first time since March, "Big Tech" stocks endured a sizable correction during September. The tech-heavy Nasdaq Index declined by as much as 12% during the month before recovering somewhat, bringing its total increase since its March low to 63%.

Heading into the final quarter of 2020, investors will be wondering whether stocks can continue their upward trend. Perhaps the biggest determining factor lies at the doorstep of governments and central banks. The recovery in stocks this year was largely driven by monetary and fiscal stimulus, the likes of which has never been seen. A continued rise in equity markets may come under pressure over the next quarter as political uncertainty comes to the fore. The 3rd of November will see Americans return to the voting booths to elect the next US president, while the Brexit process continues down its uncertain path.

The rise in political uncertainty and the accommodative policies of governments and central banks has led investors to allocate an increased amount of their capital into the safe-haven asset of gold. Despite a pull-back in the price of gold in the third quarter which saw it fall below the \$2,000/ozt level to end the quarter at \$1,888/ozt, gold has been the best performing major asset class this year having increased by 24%.

The rise in the gold price to record levels led to strong performance by the South African gold miners with the JSE Gold Mining index up 80% year-to-date. Gold miners such as Gold Fields (+23%), Harmony (+24%) and Sibanye StillWater (+23%) as well as platinum counterparts Impala Platinum (+25%) and Northam Platinum (+47%) were significant contributors to performance of the JSE All Share Index. The index, however, ended the quarter flat as the strong performance of the precious metal counters was offset by a decline in technology stocks Naspers (-6%) and Prosus (-4%) and rand-hedge British American Tobacco (-12%).

Strategy

The strategy started the quarter very positively, however, these gains were unfortunately reversed by the large equity sell off in September along with flat fixed income returns for the month. This impacted our performance and our longer-term numbers continue to lag. For the strategy to track back in line with its long-term CPI plus target, risk assets need to revert back to their long term mean performance over time.

We continue to be comfortable with the portfolio's positioning to provide consistent long-term returns in line with its objective.
